

Hi DRO PROS, my name is John B, and I just wanted to thank you for our great transaction last week. During our phone conversation, I mentioned that part of my machine tool repair business was installing DRO's, and we talked about the different types and brands that I had installed. I ordered a 2 axis system for my little Emco Maier FB-2 mill and was pleased with the quick shipping. I was even more pleased when I received the system two days later and saw how well made the hardware was.

The installation was a breeze, just made a couple of standoffs but nothing fancy. I have attached a few photos of the finished job. I think it turned out very well. I began playing with it immediately as I had already watched the DVD and wanted to try out some of the routines for myself. Even though I am not a trained machinist, I felt comfortable using the DRO and I can't wait for the first time to actually make a bolt hole circle or enter a series of SDM points and make something fancy!

I am starting to ramble but I just wanted to let you know how pleased I am with your product. I have told several of my customers about your product and maybe some of them will buy for themselves. Just to sum up: Great service, Well made product, Great price, Easy to install, Fast and Friendly service, Great transaction, Really pleased customer.

Thank you very much!

John B
